Technology AI Operations • Process Optimization • Data Analysis • Cross-Functional Collaboration

EXPERIENCE

Backend Developer

Jan 2025 – Present

Floaty AI

Atlanta, GA

- Supported enterprise AI integration initiatives by developing centralized AI gateway services connecting multiple large language model providers (OpenAI, Claude, Gemini, Mistral).
- Analyzed system usage data to optimize model routing, cost efficiency, and response latency, improving performance by 40%.
- Collaborated cross-functionally with product and operations stakeholders to define rollout plans, document workflows, and track feature delivery milestones.
- Documented internal processes and created technical specifications to support scalable onboarding and operational consistency.

Backend Developer

May 2024 – Dec 2024

Calculyte.com

Remote

- Designed API services powering a high-volume computation platform with sub-100ms response times and scalable database architecture.
- Used SQL and performance monitoring tools to analyze usage patterns and optimize query efficiency.
- Partnered with frontend and product teams to translate business requirements into structured implementation plans and documented feature workflows.
- Maintained clear reporting on system metrics and deployment progress in Agile sprint cycles.

Independent Consultant

Oct 2023 – May 2024

Kaldun Coding Academy

Remote

- Developed secure REST APIs for payment processing and student engagement tracking, increasing monthly donations by 25%.
- Created structured documentation for authentication flows and operational procedures to support long-term maintainability.
- Worked directly with leadership to prioritize deliverables and communicate project milestones.

Patent Examiner (Image Processing Art)

Apr 2024 – Aug 2024

United States Patent and Trademark Office (USPTO)

Remote

- Analyzed large technical datasets (20M+ records) using SQL-based search systems to identify trends and validate algorithmic novelty in AI and image processing systems.
- Prepared structured written evaluations communicating findings to inventors and senior technical reviewers.
- Applied strong analytical reasoning and regulatory standards to support decision-making processes.

PROJECTS

AI Workflow Automation Platform | Python, APIs, AI Systems

2024 – Present

- Designed a microservice pipeline integrating AI APIs for transcription, content generation, and media automation.
- Developed structured process flows and documented integration points to improve operational repeatability.

SKILLS

Programming: JavaScript, Java, Python, C++

Data & Analytics: SQL, PostgreSQL, Redis, Performance Monitoring

Tools: Microsoft Office Suite, Docker, Git, Linux

Concepts: Agile Methodologies, AI Systems Integration, Process Documentation, API Design

EDUCATION

University of Maryland, Baltimore County

Baltimore, Maryland

B.S. in Computer Science

- GPA: 3.5, Dean's List (3x)
